AND

# GUIDE

TO THE

# FLOWER & VEGETABLE

# Our Seed and Flower Gardens

Are pleasantly situated in the beautiful village of Fairport, the first station on the N. Y. C. R. R. (Direct Road), Eastward, only twenty minutes ride from our Office and Seed Warerooms in the city of Rochester. The gardens are within sight of all passengers passing on the cars between Rochester and Syracuse. Our show of flowers this Spring, for beauty and magnificence, cannot be surpassed. Thousands of Hyacinths, Tulips, Crocuses, &c., will burst forth in all their splendor, while later in the season the Gladioli, Phlox, Asters, Zinnias, Pansies, Lilies, and many Annuals, will present a sight that will dazzle the eye with their magnificent and gorgeous display of colors, making the gardens a continual mass of bloom during the coming summer.

#### O'KEEFE'S LARGE WINTER-HEAD LETTUCE.

Having grown and thoroughly tested this variety for the past three years, we now offer it to the public as a *fine and valuable* acquisition for both the market and private garden, as it is ready for use fully *three weeks earlier* than any other variety of Lettuce except that grown under glass.

# It will stand the Winter without protection in the coldest of our Northern climates!

It forms very large, solid, exceedingly tender, greenish yellow heads, the outside leaves being of a brownish tinge, and is the most crisp and tender of any Lettuce we have ever had placed on our table.

CULTURE.—It should be sown about the first of September, in a good rich soil. In the fall, when the plants are well up, and have three or four leaves, they should be transplanted, setting them about one foot apart; after culture being the same as for Cabbage. This Lettuce can also be sown in the Spring at the usual time, being ready for the table at the same time with other varieties; culture same as when sown in September.

Orders for Seed filled in regular rotation by mail, in sealed packages, at fifty cents each, and can only be had, *genuine and true*, at our establishment.

#### FORMATION OF CLUBS.

The extensive distribution of our seeds is an especial object. Our Catalogue has been prepared with much labor, and it has been our aim to make it a safe guide to the cultivator, both in the selection of varieties and their growth. As an additional inducement to individuals who desire to possess a large collection, or for the formation of clubs for the same object, we offer to send by mail, free of postage charge, to any address in the United States, on receipt of the amount of the order, with the name and full post-office address of each party forming the club, seeds selected as follows:

Purchasers	remittir	ng \$1	may select	seeds at	catalogue	prices	amounting to	\$1	10
"	66	2	"	"	"	- "	66	2	25
66	**	3	**	66	66	"	"	3	45
66	66	4		66	66	66	66	4	70

66	66	20	**	66	66	66	46	26	00

These will be packed and mailed to one address, or in separate packages, to the address of each individual forming the club, as may be desired.

The above rates of discount apply only to flower and garden seeds in packets, and will not include any seeds by weight or measure, or plants, roots or bulbs.

# COLLECTIONS OF FLOWER SEEDS BY MAIL, FREE OF POSTAGE TO PURCHASERS.

In order to more extensively disseminate our choice varieties of Flower seeds throughout the country, giving those who reside at a distance the same facilities for procuring them as those who have the opportunity to make personal application, we put up select assortments expressly for sending by mail, giving particular attention to this department of our trade. The low rate of postage enables us to supply distant customers with all the choicest seeds upon the same terms as those who are near the market. Orders may be forwarded to us with the understanding that the seeds we furnish are of the very best quality, and the selection such as will gratify every purchaser. Our collections are made up with great care, and all the varieties, unless those entirely new, we can confidently recommend.

# THE FLOWER GARDEN.

"Your voiceless lips, O flowers, are living preachers-Each cup a pulpit, and each leaf a book, Supplying to my fancy numerous teachings from lowliest nook."

It is with great pleasure that we now present to our numerous friends the present edition of our Catalogue of Seeds and Guide to the Flower and Vegetable Garden. Nearly a year has passed since our last issue, and yet it seems but a few weeks. It is one of the greatest pleasures to us to send out our "Guide" each season to our many thousand friends, situated, as they are, in nearly every part of Europe and America. Although we shall never be enabled to see all our customers, yet their letters from year to year bring their memory to us, even as if we had lived near them for years. Often have we wished, when reading their kind letters, that we might speak with them, if only for once; and we hope that if they ever pass through our beautiful city that they will call upon us. It has been our endeavor to make our Guide reliable in every respect, not only in the descriptions of the great number of flowers and vegetables which are enumerated on its many pages, but equally so in the full and complete practical directions for the successful growth of each variety. All flowers and plants are divided into natural groups, and to know the character of one of these groups, gives an idea of the whole. The Aster and Helichrysum are familiar to almost every cultivator; and when it is known that these belong to the composite order (Compositæ), it will at once be understood that any unknown plant belonging to this order, resembles in some respects the above flowers. It is to convey this general information that we think the addition of the natural order is highly important. In addition to this, our "Remarks on laying out flower gardens" will, we hope, not only prove a valuable aid to our customers, but assist in disseminating an increasing taste for gardening art. We have also stated in our Catalogue, in the introduction to each class, the habit, season of flowering, manner of sowing the seed, transplanting, and all other necessary directions, so that the most inexperienced may not fail. Under the heading "Directions for sowing seeds, transplanting, &c.," we give some very excellent directions for the cultivation of Annual, Biennial and Perennial flower seeds. As specialties, we refer particularly to our list of Novelties, which is a correct record of all the new introductions to the floral world. We import our seeds ourselves, direct from Europe. We sell only fresh seeds, of very best quality to depend upon, true to name and all proved.

Our seeds are all put up in neat packages, with the name of each variety upon each—

each package bearing our own name.

To enable those who live at the most distant parts of the country to obtain choice and reliable seeds as cheaply as those who reside in our large cities, we will deliver all seeds by mail free of postage charge, at the prices named in this Catalogue. Persons can send their money by mail, and in a few days the seeds will arrive in good order at their post-office.

Large orders will be forwarded by express free to any part of the United States.

No charge for packages or packing. We guarantee all seeds to reach customers safely and in good time. All orders are filed as soon as received, and filled in the order in which they arrive. After the orders, which have accumulated before we commence sending out, are filled, every

order will be mailed the day received.

How to Remit.—Drafts on New York are best, if possible, for large sums, payable to our order. Post-office money orders may be obtained at nearly every county seat, in all the cities and in many of the large towns. We consider them perfectly safe, and the best means of remitting fifty dollars or less, as thousands have been sent to us without any loss. Registered Letters, under the new system, are a very safe means of sending small sums of money, where Post-office money orders cannot be easily obtained. Observe, the Registry fee, as well as postage, must be paid in stamps at the office where the letter is mailed, or it will be liable to be sent to the Dead Letter Office. Buy and affix the stamps both for postage and registry, put in the money and seal the letter in the presence of the Postmaster, and take his receipt for it. Letters sent in this way to us are at our risk.

Correspondents will please write their name, Post-office, County and State plainly, as we receive many orders which we cannot send, on account of not having the full Post-office address.

Also, in making out their orders, write the names of the articles they desire in separate

lines, and not mixed up with their letter.

Our customers are requested to send orders for seeds as early as possible, that we may be able to forward exactly what is ordered. This we shall do, as far as possible, though we can sometimes serve our customers better by sending other names of the same color and habit, and shall take the responsibility, unless we are informed that this course will not be satisfactory.

Our customers are requested to write us immediately, if any errors are committed in filling their orders, that we may make at once ample amends, as we desire to conduct our

business in all respects satisfactorily to those who favor us with their confidence.

COMMENDATIONS .- To attempt the publication of the numerous commendatory letters would fill several pages of our Catalogue. Gratifying as this would be to us, we are compelled to omit even the briefest extracts from the hundreds of letters expressing the satisfactory manner in which their orders have been executed, and the pleasure derived from the cultivation of our seeds.

In conclusion, we acknowledge our indebtedness to the following celebrated authors: Hon. Joseph Breck, Mr. E. S. Rand, Jr., and Mr. Fearing Burr, Jr., for much valuable infor-With many thanks to our patrons for their numerous favors during the past, we

hope to merit a continuation of their patronage in the future.

Respectfully,

M. O'KEEFE, SON & CO.

### DIRECTIONS FOR SOWING SEEDS, TRANSPLANTING, &C.

"To raise your flowers, various arts combine, Study these well, and fancy's flight decline; If you would have a vivid, vigorous breed, Of every kind, examine well the seed; Learn to what elements your plants belong, What is their constitution, weak or strong; Be their physician, careful of their lives, And see that every species daily thrives; These love much air, these on much earth rely, These, without constant warmth, decay and die; Supply the wants of each, and they will pay For all your care through each succeeding day."

Annuals.—The plants generally known as Annuals, are raised from the seed, perfect their flowers, mature their seed the same season, and perish. There are some flowers, however, cultivated as annuals, that are such only in a northern climate, being in their own more congenial region perennials or biennials. Among them are the Verbena, Eschscholtzia, Mirabilis, and many others. This class of plants may be kept through the winter in greenhouses, or in any light cellar. Annuals are most appropriate for those who are changing their abode from year to year, as from these alone a fine display may be kept up the whole season, with the exception of the vernal months, and this deficiency may be supplied by having a choice collection of perennials, grown in pots, which can be plunged in the ground, and thus removed at any time when it is necessary to change the residence. No collection of plants can be complete without an abundance of annuals, as they can be disposed of in such a way as to succeed the perennials, and keep up a continuous bloom in all parts of the garden through the season.

Annuals may be divided as follows: hardy, half-hardy and tender.

Hardy Annuals are such as may be sown in autumn, or very early in the spring, as all

the Larkspurs, Clarkia, Asters, Candytufts, etc.

Half-Hardy Annuals are those which will not bear a hard frost, and therefore not proper to plant in the open ground before the middle or last of May, as the Balsam, Cockscomb, Marigold, etc.

Tender Annuals can hardly be brought to perfection without starting them in artificial heat, in a hot-bed, or otherwise, and are very sensitive to cold, as the Thunbergia, Ice-Plant, Sensitive-Plant, etc. Many of these, in a very warm season, will succeed tolerably well, if planted about the first of June; but to have them in perfection, they should be raised in a hot-bed, in pots, and turned out into the ground about the middle of June.

Before sowing annuals, the soil in which they are to be grown, should be made light and rich, and very finely pulverized, as many of the seeds are very small, and require every advantage and care to get them up. The small seeds must receive but little covering, and that of the finest earth. In sowing these, sow them in patches six or eight inches square. The soil having been well prepared, settle the ground gently with the foot or a small piece of board, so as to make an even, somewhat firm surface. The seeds are then evenly strewed over the surface. Then take some very fine soil, and sift or strew over them, covering the seed not more than one-eighth of an inch deep, after which press the soil again gently with the board. It is now of great importance that the seeds, as they vegetate, should be protected from the scorching sun; an evergreen bough is as good as anything to shade them.

The soil must not be permitted to get dry until the young plants have acquired some strength; after which they may be left to take their chance from the effects of the sun or dryness. When the plants are of a proper size, and the weather suitable, they may be taken up with a transplanting trowel, and set where wanted. A small patch of this description will afford plants enough for any common garden. In removing them, a number may be taken up together without disturbing the roots; but when the plants have become established, all may be cut off except the strongest ones. As a general rule, a single plant gives better satisfaction than when a number are grown together, except when planted in masses, or where there is to be a group. The beauty of many annuals is completely destroyed by huddling them together. Give every plant room according to its habits. A single plant, well trained, may be made very beautiful; while a number of the same species grown together, without sufficient room, would be worthless.

Larkspur, and many other seeds, should be sown where they are to remain. A bed of Double Rocket Larkspur, well managed, is almost equal to a bed of Hyacinths, when in bloom. This succeeds best when sown late in autumn or very early in spring. The seed may be sown in drills, eight or ten inches apart, in beds, and the plants well thinned out. Larkspur and many other hardy annual seeds, if sown late in autumn, lie dormant all winter, and give much stronger plants than the same kinds of seeds sown very early in the spring, notwithstanding those sown in the spring may appear above ground as soon as those sown in autumn. The reason probably is, that the autumnal sown seeds are so prepared, by the action of the frost, that they start with greater vigor, and consequently are more robust than the spring sown seeds.

Some seeds are difficult to germinate. Indian Shot is an example—the seeds of which require scalding, to facilitate germination; or, if the hull is carefully taken off with a penknife, so as not to injure the germ, the object is effected, and it will immediately vegetate. The seed of Gomphrena globosa (Globe Amaranth) is encased in a thick coating of woolly substance, which greatly retards vegetation. If this be taken off with the hull, the germ will push immediately; or if the seed is soaked in milk twenty-four hours before planting, it will soon start; but if planted with the coating on, or without soaking, very few will appear

above ground.

As a general rule, the depth of flower seeds is to be governed by their size. For example, the Sweet Peas and Lupin may be planted an inch deep, and so in proportion. Annuals have a pleasing effect when the pleasure-ground is extensive. For this purpose the Verbenas, Phlox Drummondii, Candy-tufts, and many other dwarf-plants are desirable. The beds should be either round, oval, starry or irregular, but never square, diamond-shaped or triangular. Masses of annuals may be so arranged as to make a grand display in the common flower garden. We have seen the walks of an extensive flower garden deeply edged with a wide border of crimson and scarlet Portulacas; and, throughout the whole garden, all the annuals and other plants, in fact, were planted in masses. We have never seen a better managed garden than this one. It contained about an acre of ground.

Perennials are those plants which do not in their growth form either trees or shrubs, but which lose their tops, wholly or in part, every year, the roots continuing to live for several years successively.

Biennials are those plants that flower the second and sometimes the third year from the time the seeds are sown, and then perish.

Imperfect Perennials continue three or more years, and then die, as the Sweet William or Fox Glove, but which, with a little care in dividing the roots every year, can be kept many years.

Perennials are hardy, half-hardy and tender. Hardy Perennials stand the coldest winter without protection; half-hardy require to be well protected; and tender Perennials must be kept through the winter in the greenhouse.

#### HERBACEOUS PERENNIALS AND BIENNIALS.

The mode of cultivating this class of plants is perfectly easy. Three things have to be attended to:

First—The manner of propagation, Second—The most suitable soil. Third—The requisite temperature.

SEEDS.—Sow, for the most part, in early spring, in light soil; and plant out in the following autumn in the situations where they are to flower.

SOIL.—Different species of plants require rather different kinds of soil; but a light, rich

loam will suit the greater number.

TEMPERATURE.—Hardy, half-hardy and green-house plants require similar care, but they differ as to the amount of protection or quantity of heat they need.

#### REMARKS ON LAYING OUT FLOWER GARDENS.

A flower garden should resemble a rich picture, with all the colors nicely contrasted and blended together. We find that the most beautiful flower gardens are those in which there is a continual display of beautiful colors and sweet odors, and the plants all having a neat and agreeable habit of growth. As to the situation, we should prefer a level plot situated near the dwelling-house, and well exposed to the sun and air, with a southern aspect. The soil should be of a deep, rich loam. Work in the flower garden should be commenced during the months of August and September, that it may be completed by the middle of October to receive bulbous and many of the herbaceous and other plants, and such shrubs as are hardy enough to set in autumn. If the work is deferred until spring, it should be accomplished as early as possible, and then the proprietor will be deprived of the pleasure of having anything in its greatest perfection, except annuals and tender bulbous or tuberose plants for that season. The work should be done neatly, as a great deal depends upon the manner of laying out, the proper consistency and richness of the soil, the make of the walks and laying the edgings, whether of box, grass, or anything else. It will be difficult for us to propose any particular plan for laying out the flower garden that would be likely to give satisfaction to all, for most of our customers have a fancy of their own, and though they might ask advice, would probably, after all, follow the guidance of their own taste. We think the modern style of grouping and massing the colors in separate figures, is much neater than the old method of mixing and intermingling the species and varieties in all the beds. In grouping or massing, it is necessary to get colors which, when brought into contrast with each other, will be pleasing to the eye, and make a more immediate impression than a mixture of colors not distinct enough anywhere to give a decided effect to the whole. Another advantage of massing plants is, that they cover all bare surface of soil or parts of figures not covered with foliage and flowers, as the parched appearance of the surface, when seen, lessens the freshness of the flowers, as well as their beauty. They should be placed in regular beds or figures, neatly cut out in the lawn, and always in circles or ovals, and when well kept, the green turf will add much to the brilliant colors of the flowers, as well as to form a fine contrast to the beds themselves. For massing or grouping, we should select the most delicate and beautiful shades of pink and white, light blues and straw-colored yellow, with crimson and vermilion. For a large oval bed, the following collection and arrangement will give a brilliant display of colors from July to November: In the first row, Mignonette, to be sown all around the border, eighteen inches from the edging. After the seed is through the ground, plant all the various colors of Portulaca, alternately, one foot apart in the same row. The second row, three feet from the edging, plant all the fine mixed colors of Phlox Drummondii, eight inches from each other. The third row, four feet from the edging, sow with white Candytust, planting all the fine varieties of China Pink, three inches apart in the same row. The fourth row, five feet from the edging, plant with Purple Globe Amaranth, eight inches apart, with a German Ten Weeks' Stock between the Amaranths. The fifth row, six feet from the edging, plant alternately, all the various colors of fine double German Asters, six notes apart in the row. The space remaining in the centre, fill with all the different colors of the Petunia, planting one foot apart, among the Petunias, bulbs of all the fine colors of the Hybrid Gladiolus, which, when in bloom, with their long, densely-flowered racemes of

blossoms varying from white to salmon and carmine, scarlet and crimson, standing up among the creeping Petunias, will make a fine display. The walks of a flower garden should be wide enough to admit two persons, walking comfortably side by side. Four to five feet wili not be too wide for the main avenue, and the narrow walks should be graduated by the size of the garden. The best walks are composed of small stones or coarse gravel, covered with five or six inches of fine gravel; made in this way, they will be found to make dry walking at all seasons of the year. A walk of four feet width should be 1½ inches higher in the middle than at the sides, and for every foot of increase in width, one quarter of an inch to the elevation of the centre. In regard to edgings, Box will be found to be neater and more beautiful than any other plants. Grass makes a very neat edging if kept in order, but it requires so much attention to keep it in its place, that we would not recommend it. Thrift, if neatly planted, will make handsome edgings to borders or flower beds. Box edgings should be trimmed in June, and should never be permitted to grow tall. It should be protected in winter by coarse litter. No flower garden can be complete without some grass. First see that the ground is well prepared by deep trenching or digging, pul verizing the soil that the roots of the grass may penetrate two feet deep, level it and leave it to settle for about ten days, then rake off smooth, and it will be ready for the seed. To have a fine lawn it is necessary to mow it often, and roll it, especially after a rain, as by doing so, a close texture and fine velvety turf may be obtained.

We give our customers a list of

#### PLANTS FOR SPECIAL PURPOSES.

FLOWERS FOR A CONSTANT BRILLIANT SHOW.—The Aster, Antirrhinum, Balsam, Dianthus, Delphinium, Pansy, Petunia, Phlox Drummondi, Portulaca, Salpiglossis, Scabiosa, Stock, Double Zinnia, and many other varieties, should have a place in every collection.

FLOWERS FOR MASSES OF COLOR.—The following are some of the most desirable plants for growing in masses for display in the garden. A few of the taller varieties are most desirable for cutting.

White.—Sweet Alyssum, Candytuft, Clarkia, Sweet Pea, Phlox, Portulaca, Stock.

Blue.—Ageratum, Mexicanum, Campanula, Clintonia elegans, Gillia achillæfolia, Larkspur, Myosotis, Nemophila insignis, Sweet Pea, Veronica Syriaca, Whitlavia grandiflora.

Shades of Red.—Cacalia coccinea, Dianthus, Sweet Pea, Petunia, Phlox, Portulaca, Stock, Zinnia.

 $\it Yellow.—$ Erysimum, Esch<br/>scholtzia, Marigold, Oxyura chrysanthemoides, Portulaca, Dwarf Tropæ<br/>olum.

For a Summer Hedge.—Sweet Pea, Amaranthus, Delphinium cardiopetalum, Gomphrena globosa, Double Zinnia.

ORNAMENTAL LEAVED PLANTS.—We know of nothing better than the Cannas, Ricinus, Amaranthus and Parilla Nankinensis. The Ricinus has a tap root, and if grown in a hot bed should be in pots so that they may be transplanted without injury. The Canna start in heat. The Ricinus is from four to ten feet high.

Flowers Desirable for Fragrance.—Mignonette, Sweet Alyssum, Sweet Pea and Erysimum.

CLIMBING PLANTS.—For the convenience of customers we have placed all the climbing plants in a separate department.

FLOWERS AFTER HARD FROSTS.—We name a few of the most desirable of these frost-bearing flowers:—Dwarf Chrysanthemum-flowered Aster, Bartonia aurea, Sweet-scented White Candytuft, Centranthus macrosiphon, Double Daisy, Erysimum, Gilias, Lupins, Malope, Mignonette, Nigella, Oxyura chrysanthemoides, Pansies, Sweet Peas, Phlox Drummondi, Japan Pinks, Ten-weeks Stocks.

For Baskets.—Abronia, Sweet Alyssum, Fenzlia, Ipomœa, Leptosiphon, (particularly L. hibrida), Loasa, Lobelia, Mignonette, Mimulus, Nemophila, Nolano, Thunbergia, Tropæolum and Verbena. All the varieties mentioned above, except the running sorts, are excellent for pots.

EVERLASTING FLOWERS.—These are also given in a special department of the Catalogue, with directions for treatment.

ORNAMENTAL GRASSES.—These are in a separate department.

BULBS AND TUBERS.—A choice collection of these, adapted for Spring planting, will be found in the last part of the Catalogue.

VEGETABLES.—In this department will be found the choicest vegetables known, which we have taken especial pains in selecting from the best seed growers.

#### FLORAL DECORATIONS.

"Make your home beautiful—bring to it flowers; Plant them around you to bud and to bloom; Let them give life to your loneliest hours— Let them bring life to enliven your gloom.

The outward beauty of home is in pleasant grounds, walks, shrubbery, flowers, trees, and whatsoever can render it agreeable to the eye, and suggest happy and virtuous thoughts to the mind. Of this kind of beauty we should have much about our houses. A vine arbor, a flower bed, a grass plat, a gravel walk, a shade tree, a pleasant yard are easily had, especially by farmers and villagers. No one with hands and health should be without such adornments to his home. These surroundings, clean and comfortable, brightened by flowers, music, sunlight and soft gentle words, are dreams of beauty that awaken something almost beatific in many a dreary cellar and lonely garret, which will never entirely fade from the memory, but will forever linger in the mind and heart as reminiscenses of happy hours at the "old homestead," and as oft recurring incentives to strive after a higher and There has been of late a marked increase in the use of flowers for social purposes. Every dinner party or dancing party must now be graced with these "stars of At larger assemblies there is always a lavish display of flowers, as if it were designed to intoxicate the guests with delicious odors of innumerable blossoms. If we visit a lady, flowers must precede our coming; if we drive out with her, the odor of flowers must sweeten the pleasure. Superb presentation baskets and bouquets are seen in almost every parlor, and are the horticultural compliments of gentlemen to ladies. Flowers are, of course, extensively used at weddings, but are employed more liberally at funerals. Five hundred dollars are not unfrequently expended in crosses and wreaths for those solemn occasions. Many of our churches of late years have employed flowers extensively on occasions of religious festivals. A child, even, can plant a flower seed or a shrub; and, if properly taught and encouraged, will be glad to engage in such pleasant labors. In the morning and evening hours, how much may be done to beautify one's home. If every week adds a little, and every year more, how much will be done in and about one's dwelling to give it an air of cheerful beauty. And of all beauty, that which is natural is most to be admired—such as grows, bears and blossoms. Give us, then, flowers to help out more fully our inner enjoyments of literary life and pleasure, and to raise our thoughts more fully from "nature up to nature's God."

#### THE SEED ENTERPRISE.

From the Lyons Republican, Lyons, N, Y.

It is a great pleasure for us to notice the large and extensive Seed Establishment of Messrs. M. O'Keefe, Son & Co., of Rochester, N. Y. This firm, during the past few years, have built up an astonishing business in this line of trade. We were shown, a short time since, correspondence from the West Indies, South America, and we might say nearly every part of the world, ordering seeds from them. From a very few hundred catalogues printed the first year, they have increased to many thousands, and now use for this season nearly six tons of paper for the "Catalogue and Guide" published annually by them (which issue is sent out free of charge every January). This valuable work contains many directions for the cultivation of both flowers and vegetables, and is well worthy of a place in every florist's library.

It is enough to make a bachelor's heart go pit-a-pat to step into their rooms during the spring season, when their business is under full headway, and observe the graceful motions of the numerous young ladies employed by this firm. When their orders are received, they are registered and handed to a corps of young ladies, who pass around the rooms and gather up the packages to fill the same. They are then given into the hands of a second corps, who re-examine them and pack them carefully; after which the packages are directed for the mail or express. Their daily mails are very large, requiring one man's time to open the letters and register the orders. They import from the largest growers in Europe, and thus have the greatest facilities to enable them to fill orders with promptness.

We are well acquainted with the partners of this house, and know them to be men of the strictest integrity, who by steady industry and untiring energy have earned for themselves a position among our best American Seedsmen and Florists.

#### SELECT LIST

OF

## FRESHLY IMPORTED FLOWER SEEDS.

#### FLOWERING THE FIRST SEASON.

#### ABRONIA. Nyctaginaceæ.

Handsome trailing perennials, with clusters of sweet-scented flowers, resembling the Verbena; bloom during the whole season. Fine for baskets. Set plants eighteen inches apart.

pkt.	cts.
Abronia umbellata, rosy lilac; white eye; beautiful; treat as a half hardy annual,  "fragrans, white; hardy perennial,	$\begin{array}{c} 10 \\ 25 \end{array}$
ADONIS. (Pheasant's Eye.) Ranunculaceæ.	
The flowers are very brilliant, but small; bloom for a long time. Set twelve inches apart. Hardy annuals.	
Adonis æstivalis, summer; scarlet; 2 ft.,	10 10
AGERATUM. Compositæ.	
Hardy annuals for beds or borders; nice for cutting; flower the whole summer; flowers small, in clusters. Set six inches apart.	
Ageratum conspicuum, pure white; about 18 in. high; fine,  "Mexicanum, blue, 1 ft.,  "ananum, blue; dwarf; 6 in.,  "albiflorum, white-flowered; fine; 1 ft.,  "ananum, dwarf white; very fine,  "cœlestinum (Phalacræa) Tom Thumb, light blue; compact habit; abundant bloomer; fragrant; 1 ft.; new,	10 5 5 10 10
AGROSTEMMA. Caryophyllaceæ.	
Hardy annuals. Flower is like a pretty, single pink, on long slender stems; about eighteen inches high. Bears transplanting; set about six inches apart.

COLLINSIA. Scrophularinæ.	
Annuals. Sow in open border in patches of eight or ten plants. To form a mass, sow thinly, and when the plants are up, thin out to about three inches apart.	
Collinsia multicolor marmorata, white and rose, marbled; 18 in., bicolor, lilac and white,	10 5

#### CONVOLVULUS. (Bind-Weed.) Convolvulaca.

Very pretty hardy annuals. For *C. major*, see department of Ornamental Climbers. The species *C. minor* given below is a fine border plant and a good flower for massing. Sow in open ground in spring. Plants are about two feet high and of trailing habit.

Sow in open ground in spring. I raise are about two feet high and of training habit.			
Convolvulus minor splendens, violet, white center,  " monstrosus, large, dark, purple flowers, spreading habit,  subcœruleus, light blue; very pretty,	t. cts. 5 5		
" New Dark, quite dark,	5		
" lilacinus, lilac; fine,	5		
" All the above mixed,  aureus superbus, golden yellow; new,	5 20		
CREPIS. Composite.			
Hardy annuals. Beautiful and of the easiest culture, of prostrate habit and make a fine appearance when grown in masses. Sow in open ground, thinning out the plants to about eighteen inches apart.			
Crepis barbata, light yellow with bright purple; brown centre,  " rubra, red,  " Drummondi, deep pink; nice,  " flore-albo, white,  " Mixed colors of above varieties,			
CUPHEA. Lythraceæ.			
Ornamental half-hardy annuals. Sown in frame. Plants taken up and cut back will bloom through the winter.			
Cuphea Zimapanii, flowers large, purple and violet,  "eminens, bright red and yellow; new,  "Galleottiana, new,			
DAISY, DOUBLE. (See Bellis.) Composita.			
DATURA. (Thorn Apple.) Solanaceæ.			
Half-hardy annuals. Some of the best are curious and beautiful, containing varieties of double-blue, white and straw-color. All the species open during the night; remain in bloom during the next day, and then perish. If the buds of <i>D. Wrightii</i> are cut off in the afternoon and placed in the house in water, they will begin to unfold and by evening will be fully opened, and will fill the room with a delightful fragrance. Branching plants; two feet high. Set eighteen inches apart.			
Datura Wrightii, trumpet-shaped flowers; 7 in. long, white, shaded with lilac,			
early under glass,	15		
fastuosa alba pleno, double white; fine,  " cœrulea pleno, double blue,			
" atroviolacea plenissima, new; very pretty,			
DELPHINIUM. (Larkspur.) Ranunculaceæ.			
A beautiful genus of hardy, free-flowering plants, including the annual and perennial larkspurs. Flowers on long spikes. Sow in fall or early in spring.  Annual Larkspurs.—The dwarf sorts make beautiful masses when standing five or six inches apart. The tall varieties grow two feet high, and are fine for bouquets. Plants should stand eighteen inches apart. Sow where to bloom.			
Delphinium Ajacis hyacinthiflorum (Double Dwarf Rocket), beautiful mixed colors,	5		
" elatior flore-pleno, (Tall Rocket,) fine large plant; flowers similar to above,	5		
Consolida flore-pleno (Stock flowered), double, branching; flowers are produced in spikes, which, continually pushing from the main stem, afford bloom in abundance during the whole season mixed colors,			

#### DELPHINIUM—Continued.

nkt	cts.
Delphinium Consolida flore-pleno, tricolor, double, beautifully striped, branching	. 4.5.
" cardiopetalum, fine; makes a good hedge or border; 18 in.,	5 5
Perennial Larkspurs—The perennials are easily grown from seed. The brilliancy of color of some of the flowers cannot be surpassed, and they may well be considered indispensable in a collection of plants. Sow early in spring. Plants should stand about eighteen inches apart.	
Delphinium formosum, lively blue flowers with white centre,	10
" ccelestinum, large flowers; spikes long; sky blue; new, " elatum (Bee Larkspur), very pretty; colors mixed, " Chinese, blue, white and pink; shades mixed, " Mad. HONEYSUCKLE. French. (See Hedysarum.) Leguminosæ.	
HUNNEMANNIA. Papaveraceæ.	
Hunnemannia fumariæfolia, half-hardy perennial; flowers yellow; in July; 1 ft.,	10
HYMENOXYS. Compositæ.	
Hymenoxys Californica, a hardy annual; flowers yellow; dwarf habit; fine for small beds. Sow where they are to bloom. Six inches high	10
IBERIS. (Candytuft.) Cruciferæ.	
Hardy annuals; excellent for beds, good for cutting; about a foot in height. Sow where they are to bloom, either in fall or spring. Thin out to about four inches apart.	
Iberis, Crimson, dark reddish-purple,  " Purple, showy, bright,  " White, white flowers, in umbel-like clusters,  " Rocket, pure white, in long spikes,  " Lilac, bluish-lilac,  " Sweet-scented, pure white, fragrant, foliage pretty  " Rose, very delicate,  " Kermesina (Dunetti), extra dark crimson,  " All the above colors mixed,	5 5 5 5 5 5 5 5 5 5

#### IMPATIENS. (Balsam.) Balsaminacea

Beautiful and very popular hardy annuals. The Camellia-flowered varieties are nearly as double and regular in shape as Camellias, while the Rose-flowered are also very double, and many are equal in shape and fullness to that named flower. Dwarf varieties do not produce as double flowers, as above, although they are very pretty. Sow in hot frames in February or March; transplant into small pots; from these shift them into larger pots, and when large enough plant out in beds or borders, setting plants two feet apart; or later in season, sow in open border, in a dampish, sheltered place. They need a rich and somewhat moist soil. Dwarf varieties grow about a foot high, while the tall varieties reach the height of two or three feet.

Splendid; as double as the Dahlia. No new annual has excited so much attention in Europe. May be transplanted safely. Sow under glass early in spring, or in open ground as soon as frost is over. Plants begin to blossom when small, and increase in size and beauty until frost. The same flower will continue in perfection for two months. Plants grow over two feet high. Plant in good soil, set twenty inches apart each way. Our seeds are saved only from perfectly double flowers. The Zinnia branches freely, when accomodated with space. Often the first flower that opens is imperfect, while those following will be perfectly double.

Zinnia, Double,	Choicest, all the	best colors	mixed,	16

#### FLOWERING THE SECOND SEASON.

ADONIS. Ranunculacea.	
Adonis vernalis, hardy perennial; large cup-shaped yellow flowers; good for borders; sow where it is to flower, in good light soil. Plants are one foot high,	10
AGROSTEMMA. (Rose Campion.) Silenacea.	
Agrostemma coronaria bicolor, biennial; a common border flower; showy; deep red flowers; foliage covered with light down; sow where it is to bloom,	5
ALTHEA ROSEA. (Double Hollyhock.) Maisacea.	
Biennials. This flower is an established favorite with all florists. Sow in spring in light rich soil, and when plants have put out about six leaves, transplant to the place where they are to remain. Eight to ten feet high.  Althea Rosea, double; from the best named collections in Europe,	18
ALYSSUM. Crucifera.	
Alyssum saxatile compactum, hardy perennial; flowers are of a brilliant golden yellow; sow where to bloom; plants are one foot high,	1ă
AQUILEGIA: (Columbine.) Ranunculacea.	
Very handsome hardy perennials. Sow in good garden soil, and when plants are large enough, transplant to six inches apart. Plants are from one foot to eighteen inches high.  Aquilegia, Double, mixed colors.  Carnation, or Striped, white, with broad red stripes; double,  Skinneri, scarlet and yellow.  gigantea, robust growth; flowers large,	25
CAMPANULA. (Bell-Flower.) Campanulacea.	
Very handsome and hardy plants; free bloomers; sow in good rich garden soil.	
Campanula Carpatica, blue; fine; 18 in  flore-albo, white; 18 in  Mixed colors.  Medium, (Canterbury Bell, large flowers; 3 ft.; blue and white; mixed or separate, each,  filore-pleno, double; blue; 2 ft  flore-pleno, double; white; 2 ft  grandiflora, blue flowers, large.  Leutweinii, light blue flowers; large; plant dwarf; 1 ft  pulcherrima, beautiful flowers; 18 in  pyramidalls, blue: beautiful; 4 ft  alba, pure white; 4 ft	5 5 5 10 10 10 10 10 10 10 10
CARNATION. (See Dianthus Caryophyllus Var.) Caryophylluser.	

CHEIRANTHUS CHEIRI. (Wallflower.) Crucifera.	
Half-hardy perennials, having rich and handsome double flowers. Sow in a bed of light, rich soil, and whenever plants are large enough, transplant into frames, and later transplant into places where they are to flower. Plants are about one and a half feet high.	
Cheiranthus Cheiri, fine mixed colors, double,	2¢
CINQUEFOIL. (See Potentilla.) Rosaceæ.	
COLUMBINE. (See Aquilegia.) Ranunculaceæ.	
CYPRESS-STANDING. (See Ipomopsis.) Polemoniacea.	
DIANTHUS BARBATUS. (Sweet William.) Caryophyllacea.	
Hardy Perennials. Treat as a biennial. Sow in beds of light, rich earth, early in spring, and transplant as soon as large enough. In September remove to the borders or ceds where they are to bloom, taking care to have a ball of earth around the roots when removed. Set a foot apart. The following varieties have clear, distinct, varied and beautiful colors.	
" " Double, splendid; very large; perfectly double, " " Common Double, " " Dunetti, blood red; velvet texture, " " nigricans, Novelty, 1868. Flowers are of a brilliant dark red, with white anthers, the black violet color of its foliage makes	10 10 10 10
DIANTHUS CARYOPHYLLUS VAR. (Carnation.) Caryophyllaceæ.	
Superb and highly scented flowers. No flower is more desirable in the flower garden than the <i>Carnation</i> , and its colors are extremely rich and beautiful. Our seeds may be relied upon as being the choicest we could procure in Europe. Sow under glass or in open ground. Hardy perennials.	
" " English seed, from choice named flowers, " " Extra Italian seed, from prize flowers " " Choicest, with white ground,	25 50 50 50
DIANTHUS CARYOPHYLLUS VAR. (Picotee.) Caryophyllacea.	
Hardy perennials, having a delicate perfume and flowers of the richest and most beautiful colors. Our seed are the choicest that can be procured. Sow under glass or in open ground.	
Dianthus caryophyllus var, German seed, from named flowers only,	20 55
DIANTHUS HORTENSIS. (Pink.) Caryophyllacea.	
Hardy perennials. Flowers are beautiful and have a delightful fragrance. Plants flower profusely in pots, greenhouse or open border. Sow under glass or in open ground. Require a light, rich soil. Plants are about one foot high.	
Dianthus hortensis, (Pink,) best double, mixed colors,	20
DIGITALIS. (Foxglove,) Scrophulariacea.	
Very handsome hardy perennials. Sow in open ground in spring, thinning out plants to about six inches apart. Good for borders. New plants may be obtained by dividing the roots.	
" lutea, yellow; flowers small, " gloxinæflora, new; spotted; fine; 4 ft.,	5 5 5 5 15 10 10

DODECATHEON. Primulacea.	
Dodecatheon Meadia, A highly ornamental early flowering perennial, about one foot high, having beautiful pale purple flowers, resembling the Cyclamen,	. eta. 25
FEVERFEW. (See Pyrethrum.) Composita.	
FOXGLOVE. (See Digitalis.) Scrophulariacec.	
FLAX. (See Linum.) Linacea.	
HESPERIS. (Garden Rocket.) Cruciferea.	
Hardy biennials. This plant is a great favorite in the flower garden. The flowers are superb, and highly esteemed for their fragrance and beauty. Excellent for bouquets. Two feet high. Sow in open ground.	
Hesperis, Sweet Purple,	10 10
HOLLYHOCK, DOUBLE. (See Althea Rosea.) Malvacca.	10
HONESTY. (See Lunaria.) Brassicacea.	
HIIMEA Commonity	
HUMEA. Compositæ.	
Humea elegans, a beautiful greenhouse biennial. Sow in spring and pot from smaller to larger pots for a year; winter in a cold frame, and set plants the next May in the open border. Water regularly when in the pots	15
IPOMOPSIS. (Standing Cypress.) Polemoniacea.	
Handsome biennials. Plants have fine foliage; also bloom for a long time. Sow in a cold, dry frame, in July; remove to greenhouse for the winter, and in spring shift into pots. Water carefully. Plants are about three feet high.	
Ipomopsis aurantiaca, orange,	10
" Beyrichii, scarlet, elegans superba, orange scarlet, elegans superba	10 10
" rosea, new; fine,	20 20
" Jaune Canarie, canary yellow,	20
LATHYRUS. (Everlasting Pea.) Leguminosæ.	
Very showy and hardy perennials, of a climbing habit, which makes them very nice for covering arbors, etc. They are also good for bouquets. Sow in spring in good light soil, in the borders of the open ground. When supported, they reach the heighth of six feet.	
Lathyrus Latifolius, red,	5
" albiflorus, white, " roseus, rose color,	25 10
" grandiflorus splendens, large-flowered, showy,	10
" rotundifolius, round leaves; purple, " New Scarlet, fine,	10 10
" Mixed varieties,	10
LINUM. (Flax.) Linaceo.	
Beautiful plants and quite showy. The flowers appear as if floating in the air. They	
bloom abundantly and for a long time. Sow in any good garden soil.	
Linum perenne, blue,  " album,	5 5
" luteum, yellow,	15 15
" candidissimum, large flowers, snowy white,	25
" rosea, new; rose-colored; very fine,	25
LUNARIA. (Honesty.) Brassicacea.	
Lunaria biennis Purple, hardy plants, useful for winter bouquets; good for borders; sow where to bloom; plants are about 1 ft. high,	5

	_
MATHIOLA INCANA. (Brompton Stock.) Cruciferæ.	
Biennials. Flower the following winter or spring after sowing the seed. Sow thinly in open border in spring, and when large enough transplant to piace where they are to bloom; or may be potted and kept in frames during winter and planted out in spring.	
Mathiola incana, mixed colors,	20 25 50
MONKSHOOD. (See Aconitum.) Ranunculacea.	
CENOTHERA. (Evening Primrose.) Onagracea.	
Hardy perennials. The flowers open only towards night, hence the name Evening Primrose. Sow in a light, rich soil. The following varieties have large yellow flowers, and are very showy.  Cenothera Missouriensis, elata and Fraseri, each	10
Chiothera ivissouriensis, erata and Frascri, Cacit,	10
PAPAVER. (Poppy.) Papaverace®.	
Hardy perennials. The varieties of this flower are all showy, and have large, brilliant flowers. Sow in open ground.	
Papaver bracteatum, scarlet; 3 ft.,  " croceum, orange; 1 ft.,	
" orientale, very large, red; 3 ft.,	10
PEA, EVERLASTING. (See Lathyrus.) Leguminosæ.	
PENTSTEMON. Scrophularianes.	
Beautiful hardy perennials. The flowers are bell-shaped racemes or spikes. Sow in open ground or under glass. They require a somewhat shady situation.	
Pentstemon Wrightii, scarlet; fine; 2 ft.,  "Muarrayanum, vermilion; beautiful; 3 ft.,  "cordifolium, scarlet; fine for conservatory,  gentianoides coccinea, scarlet; very fine,  grandiflorum, lilac-purple; 3 ft.,  "calvilli, Novelty, 1868. Mountains,  " Speciosus, Novelty, 1868. Flowers deep sky blue tint, borne in large	20
panicles. Hardy,	20 15
PICOTEE. (See Dianthus Caryophyllus var.) Caryophyllacea.	
PINK. (See Dianthus Hortensis.) Caryophyllacea.	
POPPY. (See Papaver.) Papaveraces.	
POTENTILLA, (Cinquefoil.) Rosacea.	
Hardy perennials. A bed of this flower produces a fine effect during the summer. Sow in a rich loamy soil. Plants are about eighteen inches high.	
Potentilla, mixed varieties, of best colors,	10
PRIMROSE, EVENING. (See Enothera.) Onagracea.	
PRIMULA. (Primrose.) Primulacea.	
Beautiful hardy perennials. May be grown in a common garden frame, with a glass to keep off heavy rains and hard frosts. Should be shaded when in bloom.	
Primula auricula, finest mixed	15
" choice seeds from best named flowers, " elation polyantha, (Polyanthus,) extra quality,	25 15

#### PYRETHRUM. (Feverfew.) Compositæ.

Hardy perennials; quite ornamental; bloom profusely. Sow in open ground. Plants are about two feet high.

ROCKET, GARDEN. (See Hesperis.) Crucifera.

ROSE CAMPION. (See Agrostemma.) Silenacea.

STOCK, BROMPTON. (See Mathiola incana.) Crucifera.

SWEET WILLIAM. (See Dianthus Barbatus. Caryophyllacea.

WALL-FLOWER. (See Cheiranthus Cheiri.) Crucifera,

## EVERLASTING FLOWERS.

#### (FLOWERING THE FIRST SEASON.)

These flowers are much admired for the brilliancy of their colors in a dried state. If gathered when they first open and carefully dried in the shade, the flowers will retain their color and shape for many years, and are highly prized for winter mantel bouquets, wreaths and ornaments for vases, etc. They should be hung up in small bunches that the stems may dry straight.

ACROLINIUM. Compositæ.	
Very pretty annuals. Sow in a sandy peat and loamy soil. Set eighteen inches apart. Plants are about eighteen inches high.	
	10 10 10
AMMOBIUM. (Winged Ammobium.) Composita.	
Ammobium alatum, a very pretty half-hardy annual, flowers white. Sow in good garden soil; 2 ft. high,	5
GNAPHALIUM. Compositæ.	
Gnaphalium fœtidum, half-hardy annual; yellow flowers in clusters; blooms abundantly. Sow in sandy loam and leaf mould. Plants are eighteen inches high,	10
GOMPHRENA. (Globe Amaranth.) Amaranthacea.	
Very valuable everlastings. Sow in a hot-bed, transplanting to frame, and when danger from frost is over, transplant to garden. If sown in open ground the seed should be scalded first, or soaked in milk before planting.	
Gomphrena globosa alba, pure white, " carnea, flesh-colored,	5 5 5
" striped, red and white,	5

rubra, dark purplish-crimson. aurantiaca Isabellina, Novelty 1868. Whitish yellow flowers:

aurea superba, bright orange, large and fine.....

constant,....

#### HELICHRYSUM. (Immortal Flower.) Compositæ.

Beautiful annuals. Very nice for bouquets, wreaths etc. They are of easy culture in any rich garden soil, and have a succession of blossoms from middle of summer until frost.

nbt	ots
	10 10 10 10 10 10 10 10 10 10 10 15
Very choice Everlastings; flowers of rich and beautiful colors; excellent for bouquets. Plants about one foot high.	
Helipterum Sanfordii, new; flowers small, yellow color; grow in globular clusters,  "anthemoides, pure white; abundant bloomer,  "corymbiflorum, new; clusters of white, star-like flowers,	15 15 15
IMMORTAL FLOWER. (See Helichrysum.) Compositæ.	
POLYCOLYMNA. Compositæ.	
Polycolymna Stuartii, hardy annual; large white flowers; trailing habit,	5
RHODANTHE. Compositæ.	
Beautiful annuals. Flowers when well grown are as delicate as the most elegant artificial flowers. Sow in a warm situation, in light, rich soil, and when plants are up, thin out for flowering.	
Rhodanthe Manglesii, fine for house culture.  "maculata, new; more hardy and robust than R. Manglesii; rosy purple  "alba, new; pure white; yellow disc,  "atrosanguinea, new; dwarf and branching habit; disc flowers dark purple and violet; ray scales bright purple or magenta,	10 10 15
WAITZIA. Compositæ.	
Very pretty Everlastings, having delicate flowers in clusters. Seed should be sown under glass.	
Waitzia acuminata, new; beautiful,  corymbosa, new; flowers pinkish white; yellow disc, the under side of flower finely tinged with purple,  aurea, new; yellow,  grandiflora, flowers large, golden yellow; very fine,  Steeziana, minature species, about six inches high; corymbs of yellow flowers about one-half inch in diameter,	25 25 25 25 25
XERANTHEMUM. Compositæ.	
Hardy annuals, easily cultivated. Good for bouquets. Sow in open ground and thin out for flowering. A succession of flowers may be had by sowing a month apart. Plants are about a foot high.	
Xeranthemum, Large Purple-flowered, very double, fine,  "cœruleum, double; light blue,  "compactum, compact, round-headed plants, dwarf,  "Double White, fine,  "caryophylloides, very double; flowers reddish white, striped and spotted with rose, crimson, purple and red; beantiful.	10 10 10 10

## ORNAMENTAL CLIMBERS.

#### (FLOWERING FIRST SEASON.)

This class of plants are very nice for covering old fences, arbors, buildings &c., as also good for baskets and other decorative purposes. What can be more beautiful than nature's own drapery, where places otherwise unsightly are rendered fit for fairy bowers, by their delicate climbers and trailing vines.

#### BALLOON VINE. (See Cardiospermum.) Sapindaceos.

CALAMPELIS. Bignoniaceæ.	
pkt. c	ts.
Calampelis scabra, (Eccremocarpus scaber,) a beautiful half-hardy perennial, of a climbing habit, having tubular flowers of a bright orange color, hanging in loose panicles; quite showy; sow in a light loamy soil,	15
CARDIOSPERMUM. (Baloon Vine.) Sapindacea.	
Cardiospermum Halicacabum, half hardy annual; ornamental climber; flowers white; sow in light, warm soil; about 5 ft. high,	10
COBŒA. (Mexican Oobœa.) Polemoniaceæ.	
Cobœa scandens, a climbing perennial, having large purple bell-shaped flowers, and handsome foliage. It is the most rapid growing greenhouse plant known. Sow in a hot bed, and when large enough transplant to the open ground. It requires a rich soil,	10
CONVOLVULUS. (Morning Glory.) Convolvulacea.	
Very graceful annual climbers, having large and showy flowers of various colors; a rapid grower; sow in pots, and when large enough, transplant to the open ground. They require a light, rich soil.	
Convolvulus major, White,	5
" White and violet striped,	5
" White striped with blue,	5
" Rose,	5
Dark blue,	5
" Lilac, " Violet striped,	5
	10
	10
	10
	10
" all the above mixed,	5
DOLICHOS. (Hyacinth Bean.) Leguminoso.	
Tender annuals; very fine climbers, with flowers in clustered spikes. Sow in pots	
early in spring and transplant to open ground.	
Dolichos Lablab, purple and lilac,	
" albus nanus, white; dwarf, 1	20
Spec. viganteus, large: rapid growth	10

GOURDS AND CUCUMBERS. (Ornamental.) Cucurbitacea.	
Half-hardy annuals, of a trailing habit. Good for covering arbors, etc. Require a warm and rich soil.	
Gourd, Hercules' Club, club-shaped; long; large,  "Smallest Lemon, yellow; fine,  "Pear-formed, yellow and green, striped with cream,  "Gooseberry, bright green: small,  "Striped Apple, yellow, beautifully striped; small,  "Egg-formed, like the fruit of White Egg-plant; new,  "Lagenaria vittata, half green, half yellow, striped with cream; small,  "Orange, (Mock Orange,)  "Momordica balsamina, orange and red; fine,  "Tricosanthes colubrina, striped like a serpent, changing to carmine,  "Cucurbita leucantha longissima,  "Cucumber, Cucumis dipsaseus, yellow; very fine,  HYACINTH BEAN. (See Dolichos.) Leguminosæ.	10 10 10 10 10 10 10 10 10 10 10 10
INDIAN CRESS. (See Tropæolum.) Tropæolaceæ.	
Highly ornamental climbers. Under the name Convolvus we have given the common Morning Glory, sometimes called Lpurpurea. The Ipomæas have much larger and more delicate flowers than the Convolvus. The seed should be scalded before sowing, or not be put into the ground until it is thoroughly warmed.	
Ipomœa limbata elegantissima, large Convolvulus like blossoms; mazarine blue; white margin or belt; very fine.	25
" hederacea superba, sky-blue flowers, bordered with white: large flowers, " grandiflora atrocarminea, Novelty of 1868. Flowers dark carmine, with large white throat; leaves richly marbled	25

" " with light blue, " Tricolor,	10
" All colors mixed,	5 5

#### LOASA. Loasacea.

Louisia. Louisiacea.	
Hardy annuals, remarkable for their singular flowers, which are very pretty. The plants should be handled with gloves, as the stems and leaves are invested with stinging hairs which are poisonous to the touch. Sow in open border.  pkt.	
Loasa nitida, yellow: green leaves.	10
Loasa nitida, yellow; green leaves,  "lateritia, large, dark red flowers; very fine,  "Herbertii, scarlet,	10
MORNING GLORY. (See Convolvus and Ipomœa.) Convolvulaceæ.	
MAURANDIA. Schrophulariaceæ.	
Ornamental greenhouse climbing plants. Good for baskets, etc., also for covering wire fences and pillars. Sow in June, putting the plants singly into pots during winter, and in March transplant to larger pots. In May they may be set out in the open ground for flowering.	
Maurandia Barclayana, blue and white. " purpurea grandiflora, dark blue; new,	15
" purpurea grandiflora, dark blue; new,	15
" Scarlet, very bright, " Finest mixed,	15 15
PEA, FLOWERING. (See Lathyrus.) Leguminosa.	
PHASEOLUS. Leguminosæ.	
Twining annuals, having a very showy appearance when in blossom. Good for covering summer houses and temporary trellises. Sow in open ground.	
Phaseolus bicolor, (Scarlet Runner,)	5
" Painted Lady, very showy,	5
wifite Lady,	10
" ensiformis giganteus, (Giant Bean,)  coccineus, long racemes of bright red flowers; new; very fine,	10 25
SCYPANTHUS. Loasceæ.	
Scypanthus elegans, a half-hardy twining annual, having yellow flowers. Plant is eight feet high. Sow in open border,	15
THUNBERGIA. Acanthacea.	
Pretty greenhouse perennials of a climbing habit, and should be trained to a trellis or framework. Good for baskets &c. The varieties are beautiful when in bloom throughout the summer. Sow in pots and transplant to open ground.

## ORNAMENTAL GRASSES.

#### (FLOWERING THE FIRST SEASON.)

Ornamental grasses are valuable with everlasting flowers for making winter bouquets, wreaths, etc.; also are quite interesting in the flower garden. When in flower, they should be cut and dried in the shade.

be cut and dried in the shade.

## NOVELTIES, 1869.

The following first eight novelties are now introduced in this country by ourselves, being imported direct from the grower of these varieties in Europe. They are very highly recommended to us by him.

recommended to us by min.	
Dianthus Heddewigii, diadematis. fl. pl. (Double Diadem-Pink). This Novelty differs from the other varieties of D. Heddewigii, not only by its being more luxuriant, and by the more compact and dwarf growth of its leaves, but more so by the beauty of its flowers, which have a diameter of from two to three inches, and are very regular and densely double, of all shades, from lilac, crimson and purple, to the deepest black purple—very often having a velvet-like radiant fire, impossible to be reproduced by the brush of any artist. Each petal is a marvel of beauty. The principle characteristic of them are two mirrors, with more or less distinct outlines, intensely colored with brighter border or inverse. These mirrors are surrounded by a colored zone, but the toothed border of the petal is pure white or only lightly colored. These flowers are too fine to describe, and the grower has tried to intimate their beauty by the name "Diadem Pink,"  Impatiens (Balsam), Camellia-flowered Improved. These surpass all other Balsams by their extraordinary doubleness, as also by their growth,  Myosotis azorica alba, flowers pure white; a fine contrast to the dark and light blue varieties; quite constant,  Phlox, Drummondii Heynholdi. The New True Scarlet Phlox. The flowers of this new variety are of a pure, true scarlet, with a slight tinge of coppercolor. It is quite constant, of dwarf, compact habit; one of the best acquisitions, and the very completement of Phloxes.  Primula Sinensis fimbriata punctata elegantissima, a new, beautiful, quite distinct and constant variety, as also a very fine addition to the Chinese Primulas hitherto known. Flowers dark crimson, with deep velvet, strongly fringed, the border being regularly spotted with white,  Primula Sinensis erecta arba, a new, upright Primula; white flowers,  Zinnia elegans pumila fl. pl. This new variety differs but little in the brilliancy and doubleness of its flowers from the other Double Zinnias. It is of great value, and is a fine acquisition for ribbon borders, and low	50 50 50 50 50
The following list of Novelties which we offer, are a choice selection of those offered the best growers of England, France and Germany. The greater part of them were exined when in flower, and are very highly recommended to us. The descriptions are those the growers:	am-
pkt.  Abronia arenaria, very pretty; from North West America and California; similar to	cts.
A. umbellata, having trailing stems, oval, entire; somewhat fleshy foliage; flowers are of a pure, waxy yellow; very fragrant, and bloom for a long time. Treat as a half hardy annual,  Amaranthus speciosus aureus (New Golden Princess Feather), a seedling from A. spe-	25
ciosus. Flowers are of a rich golden brown color, and are very valuable for for massing in beds, or as a line in a ribbon border,	25
Antirrhinum Hendersonii, a beautiful Snap dragon, with dark rose-colored flowers, having a pure white throat.	25
Antirrhinum Tom Thumb fl. albo, a pure white variety of the Tom Thumb Dwarf	0=
Asperula azurea setosa, a very profuse blooming hardy annual, imported from the	25
Caucasian Mountains. It is of dense habit and about one foot high, and is covered with bunches of beautiful sweet-scented, light blue flowers, which remain in bloom for a long time. A very fine acquisition,  Aster, Giant Pæony, Brilliant Rose, obtained by fecundation of the Giant Emperor Aster with Trauffaut's Pæony flowering Perfection Aster, and combines those qualities for which they are especially esteemed. Flowers are per-	50
fectly double and prony-like, and surpass the enormous size of the Giant Emperor Aster. Plant is of pyramidal habit and much branched,	50
Emperor Aster. I is at is or pyramidar habit and much branched,	110

pkt.	cts.
Aster, Pæony-flowered, bright copper-color with scarlet. Flowers of a very bright	Cus.
and interesting color,  Aster, Dwarf Victoria, Crimson Rose, a new variety of the finest Victoria Aster; of	25
dwarf habit and fine growth,	50
edging of beds, rockeries, and also as a pot-plant, on account of its dwarf habit and pure white flowers,	25
Convolvulus minus unicatus. This new variety has a single upright stem without a branch, bearing a compact head of flower-buds in great profusion, which expand into blossoms of immense size, of a very rich, purplish-blue color,	
remaining in bloom during the whole season.  Delphinium (Larkspur), Hyacinth-flowered, violet-striped, a new variety of the pop-	25
ular striped Larkspurs; very fine.	25
Eschscholtzia alba rosea. We call special attention to this new and splendid variety.  Its tender blossoms are tinged at the exterior with a rosy pink color, varying sometimes to a crimson lake. The flowers remain closed during the	
greater part of the day, and the effect of the half-open rose-colored buds is	0=
most charming,  Godetia versicolor grandiflora, a charming rock plant from Texas. Flowers very	25
large; profuse bloomer; procumbent habit; fine for rock work,	25
has broader foliage and much larger flowers,  Ipomœa hederacea foliis marmoratis, fine silvery marbled leaves. A fine acquisition.	25
Six different colors mixed,	50
Lobelia erecta bicolor, a lovely new variety of the upright Lobelias, having very pretty flowers, tinged half white, half blue,  Lupinus spec, ex Texas lilacinus (subramosus, subcarnosus), a new variety of this fa-	25
Lupinus spec, ex Texas lilacinus (subramosus, subcarnosus), a new variety of this favorite Lupin with lilac flowers,	25
Mimulus cupreus duplex, a double variety from the Andes of Chili. Flowers coppery scarlet color,	25
Mimulus repens, a distinct species having trailing stems with ovate foliage. Flowers	20
of a pale lilac-purple color, the lower lip prettily spotted with orange on yellow ground. Best suited for pot-culture, blooming during the summer	0.5
Myosotis oblongata. This Forget-me-not is larger and more vigorous than M. alpestris.  Flowers of the same fine blue tint; very fine,	25 25
Nemophila atomaria follis variegatis, a silvery variegated foliaged variety of the well-known N. atomaria,	25
Nemophila cramboides alba nigra, a fine, real distinct variety, with black centre and	
pure white bordered flowers, representing the Prussian Colors,  Conothera acaulis vera. The true <i>E. acaulis</i> now offered has small flowers, hardly one-half the size of <i>E. taxacifolia</i> sold hitherto as <i>E. acaulis</i> . Perennial	25
roots, Oxalis Valdiviana, a new variety; quite hardy; of compact growth, throwing its	25
spikes of flowers well above the foliage. The flowers are sweet scented, of a bright vellow color, produced in large sized bunches, continuing in bloom	
for a long time. Forms a pretty contrast when bedded out with other plants,	25
Palava flexuosa, new, from Bolivia; received the first prize at the Great International	
Horticultural Exhibition at London, 1866. Plant is from 15 to 18 inches high, branches freely, and produces its charming flowers an inch in diam-	
eter, in the greatest profusion. Its leaves are very neat and graceful. The flowers are of a bright rosy pink color; the base of the sepals and petals is	
almost black, producing a dark eye, contrasting beautifully with the other portions of the flower. For open air and pot culture, blooming during the	
summer and early autumn months.  Rhodanthe Manglesi major, a very great improvement of the old and much admired	25
R. Manglesi, having the giant and robust habit of R. maculata,	50
Nasturtion, Golden King of Tom Thumbs. This variety is similar in habit to the well known scarlet King of Tom Thumbs. This variety has deep golden	
flowers thrown well above the dark colored foliage. It will no doubt prove	95
a valuable bedding plant.  Stock, New Large Flowering Dark Blood-Red Emperor, the brightest and finest	25
of Emperor Stocks, giving a high percentage of double flowers,  Stock, New White Dwarf Winter. This variety is of compact dwarf habit, giving	50
an exceedingly high per centage of pure white double flowers with the good qualities of the true winter stock; very fine,	50

pkt.	cti
hemum annuum fl. purpureo pl. Tom Thumb, a very fine acquisition, and one	
which we recommend highly. It is of regular dwarf compact growth pro-	
ducing in the greatest profusion its very double flowers, of a red-purple	
color.	25
Tagetiffora, fl. pl. varietates, of neat and fine habit, and as finely colored as	
Z. elegans fl. pl. Flowers very double and of great beauty,	50
	hemum annuum fl. purpureo pl. Tom Thumb, a very fine acquisition, and one which we recommend highly. It is of regular dwarf compact growth producing in the greatest profusion its very double flowers, of a red-purple color,  Tagetiflora, fl. pl. varietates, of neat and fine habit, and as finely colored as

## FOR THE GREEN-HOUSE.

## (FLOWERING THE SECOND SEASON.)

Bocconia Frutescens, a new and beautiful foliaged green-house plant, and one of the
rarest plants yet introduced for the decoration of beds and lawns in summer. 50
Calceolaria hybrida tigrina, spotted, from a splendid collection, 50
" nana, Dwarf Tigred or Spotted Calceolaria, 25
" grandiflora, large flowers; splendid, 50
" rugosa, shrubby; seeds saved from finest varieties, 25
Campanula Vidalis, white; very showy, 50 Carnation, Remontant, or Tree Carnation, choicest Italian seed, 50
Carnation, Remontant, or Tree Carnation, choicest Italian seed, 50
Chrysanthemum Indicum, finest double
" Pompon, or Dwarf, seeds from choicest named flowers; beautiful, 50
Cineraria hybrida, first quality.
" New Dwarf, compact; very fine, 25
" Kermesina, flowers pure crimson; constant; new
Clianthus Dampieri, shrub; fine foliage; clusters of brilliant scarlet flowers; beauti-
ful. 50
" alba var., large white flowers; bright scarlet line around each
petal; very fine; per seed,
Gloxinia hybrida, choice flowers, from Benary's collection,
" erecta, upright flowers; splendid, 50
grandinora, new, the leaves are of a light green color and bent
towards the pot so as to almost cover it entirely; very
large flowers of the most brilliant colors. A new and
distinct tribe mixed,
" " pendula,5
" " erecta, 50
" " horizontalis, 50
Primula Sinensis (Chinese Primrose) cupreata, deep copper carmine, 2
" fimbriata, red; extra, 50
" white; extra, 50
" striata, white, striped with red; new,
" " erecta superba, new; fine,
" " albo-violascens, flowers white on open-
ing, changing to lilac-violet with red border; blooms pro-
fusely; very fine,
" " filicifolia rubra, 77 " flore-pleno, new; double of the most delicate flowers, 1 00
arba, new double white; constant,
rubia, new double red; constant,
moms,
Swainscala splendens, flowers rose-color in racemes, blotch in the center of pure
white; new,
Tropæolam pentaphyllum, 25

## SUMMER-FLOWERING BULBS.

The Summer Bulbs should be taken up in the fall, and kept from the frost, as they are injured by freezing. We do not forward these Bulbs until the severe frosts are over, for fear of their being injured. Where Bulbs are ordered with Seeds, the Seeds will be forwarded at once, and the Bulbs sent as soon as the weather will permit. Customers must not therefore feel disappointed because they do not find the Bulbs in the first package.

#### GLADIOLUS.

Within a few years the Gladiolus has been wonderfully improved by hybridizing; the beautiful varieties which have been produced by this process have excited the admiration of the floral world, and now constitute a class of flowers most beautiful, attractive and popular. All are of the simplest culture. The Bulbs may be planted any time in May, in soil trenched eighteen inches deep having been made rich by good, decomposed manure. If the soil is stiff, some sand may be added. Plant about a foot apart, and cover two and one-half inches deep. Each plant should be supported by a stick or rod. The leaves should not be mutilated, as any injury to the leaves during their growth in summer and autumn is an injury to the bulb. The leaves of bulbous plants should never be trimmed or cut off with a view of making them look more sightly, unless they have turned brown. These hybrids will commence showing their flowers about the first of August, and continue to bloom during September.

Having made large additions to our stock, we now offer one of the best collections of Gladioli ever in this country all of them freshly imported from the best growers in Europe.

	each.
Amabilis, bright vermilion, stained with yellow,	20
Adonis, light cherry, yellow throat with light yellow spots,	25
Archimede, large, rich, flamed salmon red, opening carmine,	25
Aristote, light rose, with purplish crimson stripes,	25
Berenice, beautiful rose, striped with red, with purple-carmine colored spots,	40
Calendulaceus, bright nankeen,	50
Calypso, rose striped, blotched with carmine,	50
Canari, light yellow, striped with rose on the inferior divisions,	50
Celine, white rose ground, striped or marbled with rosy carminate,	50
Chateaubriand, cherry-red, light ground, sometimes variegated,	30
Couranti fulgens, bright brilliant crimson, fine shaped flower,	20
Danæ, slightly sulphurish white, with purplish stains,	75
Daphne, light cherry color darker striped, bright carminate stain,	30
Endymion, very large flower, rose slightly tinted with purple,	35
Fulgens aurea picta (Dwarf), bright fire color, tipped and striped with golden yellow,	
Galathea, slightly carnation colored, nearly white, with carmine stains,	35
Gil-Blas, striped cherry color.	40
Goliath, very large flower; light red, ground striated; carmine stains,	25
Helene, lilac tinged, white, stained and striated with purple,	40
Imperatrice, white, slightly carnation tinted; stains bright carminate-rose,	30
Lord Raglan, salmon rose color; very large flower; very distinct stain of a vermilion	
red color,	60
red color,  Louis Van Houtte, velvet-like carmine; purple stained,	25
Madame Eugene Verdier, very bright red; purple stains; fine color,	50
Madame Herincq, yellowish-white, passing into dim-white; largely veined and mar-	
bled with lilac,	20
bled with lilac,  Monsieur Blouet, tender rose, shaded with carmine on the inferior divisions; large	
nowers,	25
Monsieur Vinchon, light salmon-red, variegated and lined with white,	25
Neptune, very beautiful red variegated and stained with carmine,	35
Premices de Montrouge, splendid bright vermilion (dwarf) about 2 ft. high,	30
Rebecca, white, slightly variegated with lilac,	45
Triomphe d'Enghien, carminate, lightly stained and washed with yellow,	20

We have a large assortment of the newer varieties just imported, which we can supply in small quantities. Prices, from \$1 to \$3.

#### DAHLIAS.

Of this attractive flower we have several hundred varieties, and are constantly adding all the newest and best as they are offered. The demand for this flower is very large, and although we have many thousand on hand, yet we are afraid we shall fall short of what is wanted. Nearly any name that is desired, we can always forward, and we shall always do our best to suit in color and habit. If our customers will please state what colors, etc., they desire, it will be a great convenience to us in filling their orders. Good tubers will be sent out about the middle of March. Price, 40 cents each, or \$4 per dozen.

#### MADEIRA VINE.

A beautiful climber baving thick, light green leaves. Flowers small, borne in racemes, very sweet-scented. Sometimes called Mignonette Vine and Mexican Vine. 10 cents each.

#### TUBEROSE.

The Tuberose is one of the most delightfully fragrant and beautiful of summer-flowering bulbs, throwing up tall spikes of double white flowers, two to three feet high, which remain in bloom a long period. The bulbs may be planted from February to May. When they are needed very early, they may be planted in the green-house or hot-bed in February or March; and, for a succession of flowers, in April and May. In planting, remove the useless, small offsets around the main root, and place a single tuber in a pot four or five inches wide. Use good loam and leaf-mould, with good drainage. Start them slowly, upon a temperate heat, in the hot-bed or forcing pit, or later in the season, in a frame. Water slightly at first; and, when the bulbs begin to grow, increase the quantity. Those started early, should be supplied with a good bottom heat till May, when they may be shifted into pots six or seven inches wide. By the first of June, all may be plunged out in a warm border, staking each plant to prevent their being broken by the wind. On the approach of cold weather, in September, those remaining in bloom should be removed to the conservatory or parlor, where they will continue in flower for a long period.

#### AMARYLLIS.

Amaryllis formosissima (Jacobean Lily), lily-like blossoms, each bulb producing two or three large crimson flowers; 18 in. high, 50 cents each.

#### TIGRIDIA.

A genus of Mexican bulbs growing about one and a half feet high, producing shell-like flowers of the most exquisite beauty; flowers large, about four inches across, of singularly curious shape, and the color of each variety gorgeous, and purely contrasted. No flower can exceed it in beauty. In bloom from July to the first of October. In autumn, take up the bulbs, and keep them in a dry place away from frost, until the time of planting in the spring.

Tigridia pavonia, red, spotted with crimson, 15 cents each conchiflora, yellow and orange, with spots almost black, 20 "

## HARDY PLANTS AND BULBS

The following Hardy Plants will improve from year to year after being once set. Thev may be increased also benefited, by dividing the roots:

#### CHINESE PÆONIES.

Few plants are more showy in the flower garden than the Chinese Pæonies. There is but little difference in the varieties.

Red-Pinkish red, sweet-scented. 50 cents each.

#### LILIES.

We offer a large and elegant lot of Japan Lilies, splendid bulbs, well preserved for Spring planting.

Lilium	lancifolium album,	75
66	" roseum,-	50
66	" rubrum,	50
66	auratum, the new golden banded Lily. This superb Lily has flowered twelve inches in diameter, pure white, with a golden band through the centre of each petal, and covered with brownish dots. It is deliciously fragrant; one	
	stem often produces six to ten of its immense blossoms,	. 5
64	excelsum, creamy buff, magnificent,1	. 00

#### DIELYTRA SPECTABILIS.

A tuberous rooted plant having drooping racemes, nearly a foot in length, of heart-shaped, curious, pinkish flowers, sometimes called Bleeding Heart; beautiful,....25 cents each.

## THE VEGETABLE GARDEN.

In again presenting our Catalogue of Vegetable Seeds, we embrace the opportunity to add that our stock, as heretofore, has been selected with the greatest care, to secure only the freshest and most reliable seeds. Most of the staple seeds are raised by experienced growers, expressly for our trade; and such as are imported, are purchased from the most reliable seedsmen in Europe, and from whom we have received only such as we could with perfect confidence recommend. It is our invariable rule never to send out any thing but what we are certain will vegetate freely, and prove true to name. American-grown seed always have our preference; but some kinds it is impossible to obtain in sufficient quantities to fill our orders, and those are obtained only from reliable dealers abroad.

Our prices are affixed by the ounce, pint and packet. All the kinds can be supplied by

the pound or bushel, at the lowest market rates for pure seeds,

#### ARTICHOKE.

Sow in light, rich and rather moist soil, in drills eight or ten inches apart; when plants are well up, transplant, setting plants four or five inches deep, in rows four feet apart, and two feet apart in the rows. Hoe often and water freely during the warm season. Cover plants with straw during winter.

Artichoke, Green Globe, The best; heads nearly round, with a dusky purplish tint,....

#### ASPARAGUS.

Sow in autumn or in spring, as soon as the soil is in good working condition. The seedbed should be thoroughly spaded over, the surface levelled and raked smooth and fine, and the seeds sown, not very thickly, in drills twelve or fourteen inches apart, and about an inch deep. When the plants are well up, thin them to three inches apart. Cultivate during summer, and give the plants a light covering of stable-litter during winter. The Asparagus requires a deep, rich, mellow soil.

Asparagus, Giant, the largest and best, 10

#### BEAN.

Dwarfs reach the height of one to two feet, and are grown in hills or drills. Plant the seed three to six inches apart, in a warm, light soil, in drills fourteen to twenty inches apart, and from an inch to two inches deep; or if planted in hills, allow half a dozen plants to a hill, which should be two by three feet apart.

Pole or running-Plant in hills three feet apart, slightly raised, and the stake set before planting the seed. The lower growing varieties may be planted in drills fourteen inches apart, and supported with tall brush. The later varieties will ripen much quicker if the

ends of the leading runners are pinched off when they are four to five feet high.

#### DWARF OR SNAP BEANS.

	pkt.	pint.
Early China, red eye, one of the most productive,	10	25
" Valentine, Long, tender pod; an excellent string bean,		25
" Mohawk, productive and very hardy; a fine string bean,	10	25
" Rachel, hardy and quite productive,	10	25
" Yellow, one of the earliest; excellent for string or shell,	10	25
Newington Wonder, very prolific; one of the best of string beans,		2.7
White Marrow, average quality as a string bean, but excellent for shelling when		
in a green state,	10	25

DWARF OR SNAP BEANS-Continued.

Cabbage, Sugar Loaf, early; head of medium size; tender and well flavored, ... 10 25 Early Battersea, one of the best and earliest,.... 25 10 Winningstadt, intermediate; heads full and solid; one of the best for general cultivation,.... 40 Green Curied Savoy, medium size, tender, good for table,.... 10 25 Green Glazed, large head; loose, open,.... 30 40 Red Dutch, late, large round heads, hard and solid; red color, ..... Large French Ox-heart, heads firm and close, tender and well flavored; 10 35 one of the best of intermediate sorts, ..... Drum-head Savoy, one of the best of winter cabbages,..... 10 Large Flat Dutch, late; good for autumn use and late keeping; heads open, white and crisp, and are tender and well flavored. 20 Large, Late Drumhead, hardy; large heads; close and firm; tender Early Wakefield, A fine, early variety, heading readily,\_\_\_\_\_ 50 10 50 Little Pixie, very early; quite small, tender and of mild and delicate 40 10 flavor, Early Champion, very early dwarf and compact head, 10 Early Schweinfurth, new early and large; adapted for summer and autumn use; valuable, 1 25 Burnell's King of Dwarfs, said to be the earliest variety grown; very dwarf, growing close to the ground, 10 50 flavor sweet and very fine,\_\_\_\_\_ Erfurt Large White, excellent; large, 60 15 Stone Mason Drumhead, heads very hard; remarkably sweet and 50 10 tender; good for winter use,.... Marblehead Mammoth, hard heads, of great size; very tender and 1 25 sweet; an excellent winter cabbage,.... 10 50 Premium Flat Dutch, Large and excellent for winter use,..... 25 Mason, heads hardy, good size, sweet and tender, 25 Cannon Ball, heads round, very hard and heavy; quite early,\_\_\_\_ Fotler's Improved Brunswick, new; heads fourteen to eighteen 25 1 00 inches across; very flat, hard and of fine quality, Early Pancalier Savoy, one of the earliest earlier than Early York, 20 Early Ulm Savoy, very early, sweet and tender; earlier than the Early York, 10 CARROT. Sow early in spring, in drills an inch deep, thinning out the plants to about four inches apart. The drills for the smaller varieties should be about ten inches apart, and for the larger sorts, fourteen inches. They require a good, light, well enriched loam, which should be well pulverized to the depth of about fifteen inches. The surface should be levelled and cleared of all stones and hard substances. pkt. oz. Carrot, Early Short Scarlet, one of the best sorts for the table; delicate, fine grained, mild and well flavored; small; short,... 20 20 Early Horn, good for the table; small; short; very tender,..... 10 15 Long Orange, good for stock; very productive; keeps well,\_\_\_\_\_ 5 5 15 Large White Belgian, good for stock; very productive, 15 Large Yellow Belgian, very large and productive; good for stock,.... 15 Studley, an excellent table Carrot,..... Altringham, good field Carrot; mild and well flavored for the table, ... 15 CAULIFLOWER. Sow in a hot-bed early in spring; or sow later in the season in the seed-bed, in shallow drills, six or eight inches apart. When plants are sufficiently grown they should be transplanted to where they are to remain. The after-culture is similar to that of the Cabbage. In warm, dry weather they should be watered liberally. The blanching will be facilitated by tying the leaves loosely over the top of the heads. They require a deep, rich soil. 25 2 00 Cauliflower, Early Paris, large and compact; white head, short stalk; early, 20 1 50 Walcheren, large and firm; white head; one of the best,.... 20 1 50 Early London, fine, white compact head; stem tall; early,....

Le Normand, large head, of a creamy color; very fine; early.....

CELERY.		
Sow early in spring, in a hot-bed, and when plants reach the heighth of the transplant into beds made of rich and fine soil, setting the plants about four incluster carefully once, and protect them from the sun for a day or two. About of July remove the plants to trenches about fifteen inches deep, a foot wide and feet apart. At the bottom of the trench dig in some rich, well-digested manure, rearth light and fine, into which the plants should be carefully set, about six inches the plants begin to grow, hoe in from the sides of the trench, finely pulverized exing the leaf-stalks close together, so that the soil can not get between them. Ear a week, and only a little at a time; by the middle of September they will be enough for use. Another way is to let the plants get their full growth, and the at once; in about three weeks they will be thoroughly blanched for use, and whein this way, the stalk will be very crisp, tender and white. Take up the plants winter (being careful not to disturb the soil which adheres to the roots), and pade earth or sand in the cellar. Those left in the ground should be protected by both in the form of a roof over the ridges. In this way Celery may be taken from the stalk in the ground should be protected by both in the form of a roof over the ridges.	hes apthe making about aking thes a arth, but the uper bland nearth prepared by the control of t	part; iddle t five g the part. xeep-once iched in up pared efore moist laced

#### LETTUCE.

Lettuce is generally divided into two classes: the Cabbage have round heads and broad spreading leaves. The Cos varieties have long heads and upright, oblong leaves. Sow in open ground early in season, thinning out plants to about one foot apart. They also may be sown under glass with slight heat in February; air should be admitted every day, and the plants kept well thinned out. When sufficiently grown, transplant to open ground. We call particular attention to the description on the cover of our Catalogue of a new variety now introduced by us for the first time in this country, and called Large Winter Head Lettuce.

	ties for the table or stock,	5	10
	Student, roots good size; flavor sweet, mild and pleasant; a fine vari-		
	ety for the table,	5	15

#### PEAS.

The soil for the Pea should be light and rich for early use; the next best is a deep, rich loam, but to produce an abundant crop a strong loam inclined to clay is the best. Mild manure such as leaf mould has a good effect, but the soil can hardly be too rich for most of the varieties. All varieties should be sown as early as the ground can be got ready. Plant about three inches deep, in double rows about twelve inches apart, and three or four feet from double row to double row. When the plants reach the height of three or four inches, they should be bushed, and a greater yield will be produced by doing so. Cabbage may be grown between the rows. Our Peas are all imported direct from the best growers of Europe, and are all superior varieties to those generally cultivated in this country.

#### TOMATO.

There is no vegetable in the catalogue that has obtained such popularity in so short a time as the one now under consideration. It may be served in various ways, and, in nearly

every form, is highly esteemed.

Sow in a hot-bed in March, or in pots in a warm window. Start as early and forward as rapidly as possible, whether by hot-bed or open-air culture. When about two inches high, they should be transplanted, in single plants, to warm, light, rich soil. Water freely at the time of transplanting. Shelter from the sun for a few days, or until they are well established. If sown in the open ground, select a sheltered situation, pulverize the soil finely, and sow in drills. This may be done the last of March or first of April. When the plants are three or four inches high, transplant to where they are to remain, as before directed.

Tomato, Early Smooth Red, medium size, round and smooth, productive	pkt.	02.
and of good quality; early,	5	40
Large Smooth Red, large; sometimes smooth; often irregular;		
very productive; not early,	5	::0

RUTA-BAGA, OR SWEDE TURNIP.		
These should be sown about the first of June, and ten inches apart:		
These should be sown about the first of suite, and ten fitches apart:	okt	-10

# Ruta-Baga, Yellow, Skirving's Purple Top, Laing's, Marshall's,..... AROMATIC, POT, AND SWEET HERBS.

Sow early in spring. They thrive best in a mellow, free soil, and care should be exercised to harvest them at the proper time. The beds should be kept free from weeds; and as the herbs come into flower, cut them on a dry day, and spread them in a shady place to dry for use. The best method for preserving them is to rub them through a sieve when thoroughly dry, and pack them in tin boxes. Be careful to put them in a dry place. Price per pkt., 5; by the ounce, 30c.

#### TABLE

#### Of Seeds that may be Sown from February to September.

FEBRUARY. Sow in Hot-Bed.—Early Beans, Brocoli, Early Cabbage, Forcing Carrot, Early Celery, Cucumber, Egg Plant, Early Lettuce, Parsley, Pepper, Radish, Tomato.

MARCH. Sow in Hot-Bed.—Early Beans, Early Beet, Brocoli. Brussels Sprouts, Early Cabbage, Forcing Carrot, Cauliflower, Celery, Cucumber, Egg Plant, Kohlrabi, Lettuce, Melon, Parsley, Peas, Pepper, Potatoes, Radish, Tomato. Sow in Open Ground.—Beet, Carrot, Cress. Leek, Onion, Peas, Potatoes, Radish, Spinach, Early Turnip.

APRIL. Sow in Hot-Bed .- Sweet Corn, Cucumber, Egg Plant, Melon, Pepper, Tomato. Sow in Open Ground.—Asparagus. Beans, Beet, Brocoli, Brussels Sprouts, Early Cabbage, Carrot, Cauliflower, Celery, Cress, White Endive, Kale, Kohlrabi, Leek, Lettuce, Onion, Parsley, Parsnip, Peas, Potatoes, Radish, Spinach, Early Turnip, Sage.

MAY. Sow in Open Ground.—Artichoke, Asparagus, Bush Beans, Scarlet Runners, Beet, Brocoli, Brussels Sprouts, Late Cabbage, Carrot, Cauliflower, Celery, Sweet Corn. Cress, Cucumber, White Endive, Kale, Kohlrabi, Leek, Lettuce, Melon. Onion. Parsley, Parsnip, Peas, Potatoes, Radish, Rhubarb, Salsify, Spinach, Early Turnip, All Herbs.

JUNE. Sow in Open Ground.—Bush Beans, Lima Beans, Beet, Brocoli, Carrot, Sweet Corn, Cress, Cucumber, Endive, Kale, Lettuce, Melon, Nasturtium, Okra, Radish, Salsify,

Spinach, Squash.

JULY. Sow in Open Ground.—Beans, Beet, Carrot, Sweet Corn, Corn Salad, Cress, Cucumber, Endive, Kale, Kohlrabi, Lettuce, Nasturtium. Okra, Peas. Pumpkin, Radish Spinach, Squash, White French Turnip, Rata Baga.

AUGUST. Sow in Open Ground.—Bush Beans, Corn Salad, Cucumber, Endive, Let-

tuce, Peas, Radish, Spinach, Turnip.

SEPTEMBER. Sow in Open Ground.—Cabbage (for Cold Frames), Cauliflower (for Cold Frames), Corn Salad, Cress, Lettuce. Mustard, Winter Radish, Spinach, Turnip.

## THE GREAT TOMATO, MAUPAY'S SUPERIOR.

Maupay's Superior is now offered to the public with the full assurance that in point

of flavor, productiveness and perfection of shape, it has never had an equal.

Maupay's Superior is of a beautiful deep red color; in form it is round, slightly flattened, and without a crease or wrinkle. Smoothness of the surface is not only one of its most remarkable, but one of its most desirable characteristics. This freedom from creases or wrinkles prevents the great waste usual with almost every other variety. Maupay's Superior is of a medium size, and the flesh almost as solid as a beef steak. In proof of their solidity it is not improper to state that although not of extraordinary size, the average weight is from nine to twelve ounces each. It has very few seeds. One bushel will fill as many cans as two bushels of the ordinary kind.

For marketing purposes, they are not only solid, but have a thick skin or rind which protects them from bruising and mashing in transportation. Also it admits of their being peeled or skinned for the table without scalding, which is always troublesome, and at the same time takes away the desired freshness and flavor when desired for slicing cold.

We guarrantee that the seed of Maupay's Superior shall not only be selected in the most careful manner, but that it shall also be gathered after the most approved method, and be fresh and genuine. Single packets 10 cents.

## THE SEED BUSINESS.

--:0-0:---

From the American Farmer, Rochester, October 1, 1869.

---:0-0:---

During the past few years there has been quite an extensive seed business built up in our city by the energy of our townsmen, M. O'Keefe, Son & Co. We say energy, because they entered the arena with powerful competitors, who have held the ground or years, and also because in no kind of business is there required so much detail of duty as in this, carrying as this firm does in a perfectly quiet and unostentatious way, a stock of nearly fifteen hundred varieties of the choicest flower and vegetable seeds, all of them fresh, and imported direct by themselves from the most reliable growers in Europe. They also import their hardy bulbs, such as hyacinths, tulips, crocuses, lilies, &c., direct from Holland, and from their bulbs have been grown the present season some of the finest flowers of these varieties ever seen in Rochester. We notice, by their advertisement in this issue, that they have just received one of their fall importations, and we advise all our friends to give them a call at their seed warerooms, and they will receive from them their catalogue, containing a full list of the varieties. We are personally acquainted with the partners of this house, and know them to be straightforward, honorable gentlemen, who would sell nothing but what is first quality and true to name. Give them a call.

## NO SEEDS ON COMMISSION.

-:0-0:--

As we are continually receiving applications for the sale of our seeds on Commission, we desire to say that we do not establish any agencies for their sale in that way, from the fact that we desire if possible to annually increase their reputation for freshness and purity, and if we Commissioned them as many do, their reputation could never be sustained. We are satisfied that no seed business can be conducted honorably and satisfactory to both dealer and consumer when that principle is adopted; for instance, a house sends out a thousand or more boxes of seeds on Commission, half of which, and very often two-thirds, are returned unsold, at the close of the planting season, and many of them would be entirely worthless and should be destroyed; but the general dissatisfaction seeds from such houses give, justifies us in saying they make no such sacrifice, but the new crops are adulterated with the worthless seeds from year to year. On the other hand a house that sends only such seeds as are ordered (being bona fide sales), knows nearly the quantity they annually require, and makes such arrangements accordingly. In this way they have but few seeds over, and the worthless varieties can be destroyed without sustaining a heavy loss

# CONOVER'S COLOSSAL ASPARAGUS.

-:0-0:---

The best and most valuable Novelty in Vegetables introduced in many years,

This remarkable variety was raised on Long Island, and very much improved from seeds imported six years ago from Europe, has been thoroughly tested along-side the best selected stock of both foreign and home grown seed. On the same soil, and with the same cultivation and manure, it has made fully four times the growth of the best Oyster Bay Asparagus of the same age. It is such a vigorous grower, that at two years old from the seed it will invariably send up from fifteen to forty sprouts from one-half to one and a half inches in diameter, consequently Asparagus may be cut for market or family use at least a year in advance of the ordinary scrt. The color is a deep green and the crown very close. Per packet, 50 cents.

### NEW

## BLUE PODDED RUNNER BEAN.

.0-0.

We take pleasure in introducing to the notice of our friends, this new variety of the Runner Bean. It has very long and marrow-like pods of dark violet color, and with yellowish seed. It boils very easily, and is exceedingly tender; is a very good bearer, and of rapid growth, having nice violet flowers; and altogether is considered a fine acquisition by the grower of this variety in Europe, from whom we imported the same. Per packet, 25c.

## M. O'KEEFE, SON & CO.'S

CATALOGUE OF

# Dutch Bulbous Flower Roots,

[STATE STREET, ROCHESTER, N. Y.]
CONTAINING FULL DESCRIPTIONS OF

## BULBS, SUITABLE FOR FALL PLANTING,

CONSISTING OF

# Hyacinths, Tulips, Crocuses, Lilies, &c.,

## WITH FULL DIRECTIONS FOR CULTIVATION,

Will be Published the 1st of August next.

This Annual is published for the benefit of our customers, to whom it will be sent free of charge, or to any others on receipt of their full post office address, with five cents enclosed.

Also the following Catalogues will be sent prepaid upon the receipt of postage stamps as follows:

A Descriptive and Illustrated Catalogue of Fruits, - - - - 10 cts.
" " Orn'l Trees, Shrubs, Roses, &c., 10 "
